

Description

Thermistor is temperature sensor and is used to measure temperature of inside and out side of structure.

Feature

- * Small size and selectable cable length
- * High stability and reliability by operability in extreme environment
- * high responsibility and repeatability by on effect against cable length
- * High density epoxy is formed to cable connection parts.

Specification

Sensor	Thermistor
Range	-40 °C / 120 °C
Resolution	0.1°C
Accuracy	1°C
